

edtFTPj/PRO

Secure file transfer for Java Applications

edtFTPj/PRO offers a versatile and comprehensive set of features, making it ideal for your Java file transfer projects. It is also a stable, highly reliable product that is compatible with every known file transfer server.

Features include:

- FTPS (explicit and implicit modes)
- SFTP and SCP (secure copy)
- Directory transfers and directory synchronization
- Multiple protocols supported in the one component
- Royalty-free licensing
- Multiple, simultaneous transfers by use of FTP connection pools

You also have the option to purchase the Source Code for the library, allowing you to reduce development time and minimize the human resources needed to create the software.

“Very happy!” ★★★★★

“The pros are ease of use, the support team, and also the migration process from old servers.”
